U.S. Data Review

· Labor market: vigorous in July

Michael Moran
Daiwa Capital Markets America

212-612-6392 michael.moran@us.daiwacm.com

The Employment Situation

The labor market report for July was strong in all respects: payroll employment rose sharply (up 943,000 and results were revised upward in the prior two months by 119,000), the unemployment rate fell 0.5 percentage point, and average hourly earnings jumped 0.4 percent.

Part of the surge in employment was a pandemic-related statistical quirk. Employment in local governments rose 230,000 after seasonal adjustment, but the increase reflected that fact that layoffs at schools were lighter than normal because employment levels during the school year were below normal. Local governments did not hire actively. Still, the report was favorable, as employment ex-local government grew by 713,000.

The service sector led the advance in July, with leisure and hospitality standing out (380,000 new jobs, growth of 2.6 percent versus 0.6 percent for total employment). Several other areas posted strong performances (transportation & warehousing, information, financial services, health care). Activity in the goods-producing sector was less impressive than that in the service areas. The manufacturing sector performed well with an increase of 27,000 jobs, but the advance was no stronger than its average in the prior 12 months. Construction employment rose only moderately, with the gain of 11,000 below the average of the past year.

The unemployment rate fell 0.5 percentage point to 5.4 percent, much sharper than the expected drop of 0.2 percentage point. The decline was a "strong" one. That is, a surge in employment as measured by the household survey (up 1.043 million) far exceeded a respectable advance in the size of the labor force (up 261,000). The broad

U.S. Data Review 6 August 2021

US

unemployment rate fell by 0.6 percentage point to 9.2 percent, as a drop in the number of individuals working parttime for economic reasons joined the influence of the traditional measure. (The number of marginally attached workers, those that would like a job but are not actively searching, rose moderately.)

Average hourly earnings rose 0.4 percent, marking the fourth consecutive month of solid growth (range of 0.4 to 0.7 percent over this span). The change is especially impressive given that much of the job growth in recent months has occurred in industries that typically pay below-average wages. (This measure is not fixed-weighted, and thus changes in the composition of the workforce can influence the change. Job growth in low-wage sectors, all else equal, would restrain the average.)
